August 13 1919

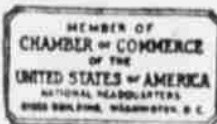

To Whom Presented

The Industrial Affairs Committee of the Tulsa Chamber of Commerce has made an investigation of the carbon made by Mr. W. W. Kathan and believes it to be a very superior article. It is our opinion that there is a great future in Tulsa for a carbon manufacturing plant manufacturing this and other carbon products because raw material is available and the market practically unlimited. There is a substantial profit in the business and under capable management a manufacturing company at this place properly organized and conducted should be an unqualified success. In view of these facts we recommend this enterprise to the careful and friendly consideration of those seeking an investment in securities of an industrial character.

Very Truly

Industrial Affairs Committee

Tulsa Chamber of Commerce

M. C. Idaho
Chairman

TO WHOM IT MAY CONCERN:

This is to certify that we, the undersigned moving picture machine operators of the theatres of Tulsa, met at the Broadway Theatre on the evening of August 7, 1919, for the purpose of testing the qualities of the carbons made by William Kathan of The Sunlight Carbon.

We tested the carbons for action of crater light, density, color of light, penetrating qualities, lasting qualities, comparison of this carbon with other carbons, and found Mr. Kathan's carbons to be much superior in every way. We were highly pleased with the results and feel safe in saying that every machine operator in America will be pleased to hear of a better product to be had in the near future. The want of a better carbon has been the operators greatest trouble and we are frank to say Mr. Kathan will find easy market for all the carbons he can make.

For This Project
is a
Boost for Tulsa*

The Sunlight Carbon Company will manufacture:

Projector Carbons for Motion Pictures.

Dry Batteries for Ignition and every general purpose.

Motor Brushes—every size from the diminutive fan brush to giant generators.

Flash Light Batteries—every size and type.

The new process carbon base, discovered by W. W. Kathan, has been tested and found superior to any carbon product in the market today.

"TULSARC"
Projector Carbons
Challenge the World!

It has been deemed advisable to set aside a limited portion of the capital stock for public subscription in order to give the small investor an opportunity to ally himself with an unquestioned legitimate industrial enterprise which is destined to grow in proportion to the enormous world-wide demand for its product.

This is an exceptionally profitable industry and if you are interested in making a gilt-edge investment, as well as helping Tulsa in her campaign for new industries, call, write or phone.
